

Design Feedback

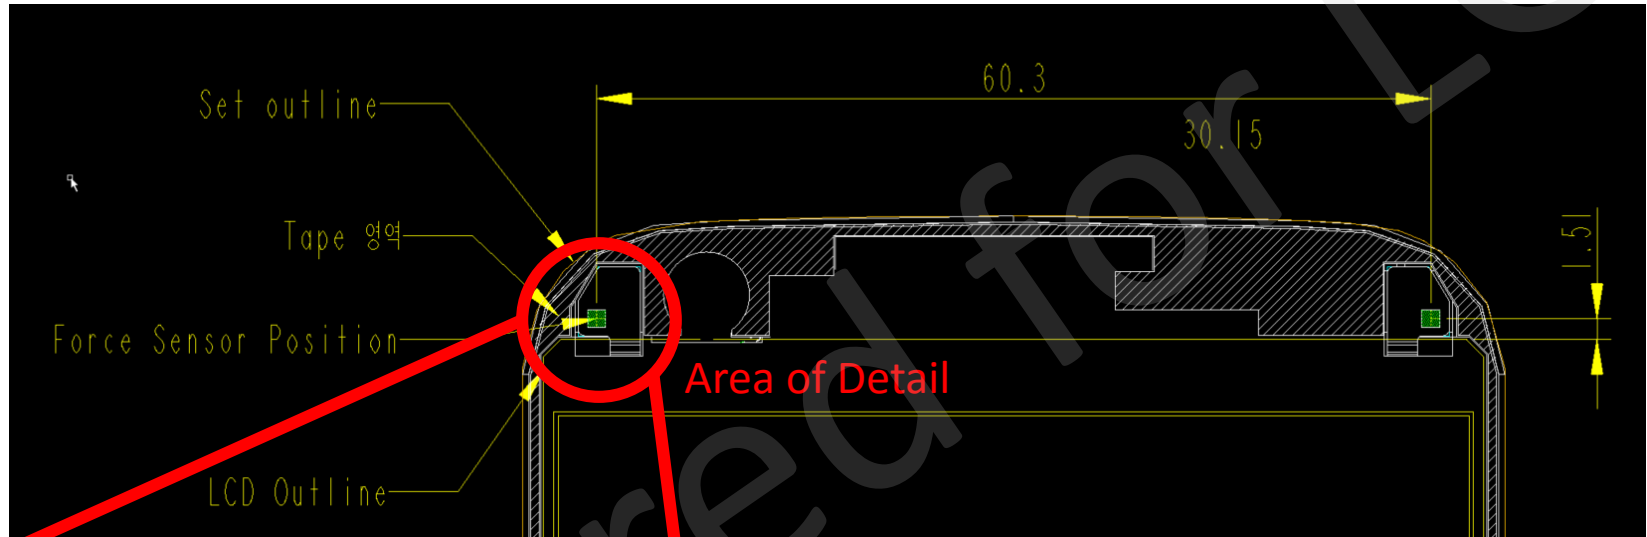

March 20th 2016

Summary

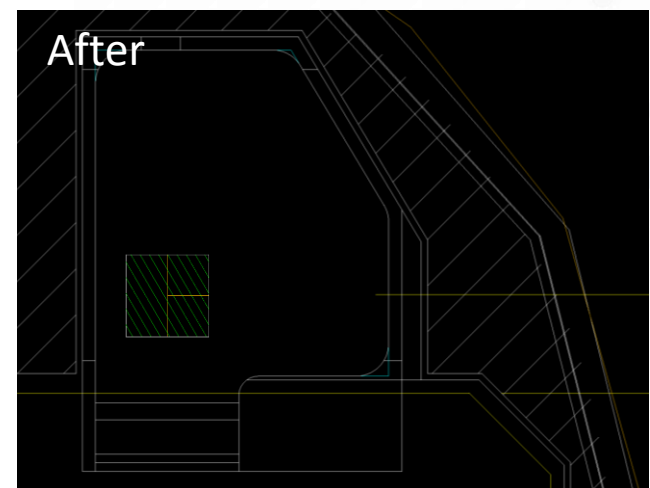

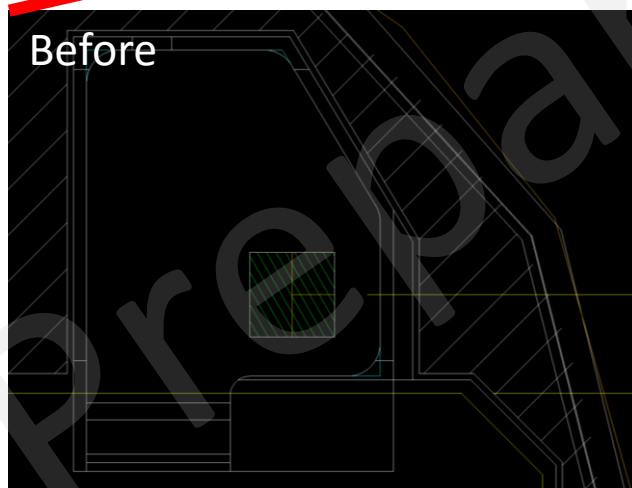

NextInput makes the following recommendations:

- Move sensors as far away from the bond area as possible
- Minimize bond area in the upper/lower regions of the phone
- Avoid “Bottoming Out” of Display and Glass on any other component

Move Sensors Far Away From Bond

Move Sensors Far Away From Bond

Minimize Bond Area

Remove this bond area and the plastic material underneath it to minimize shunt forces and ensure glass does not “bottom out” on plastic

Avoid “Bottoming Out” Display

Min Gap must be engineered so that at F_{TouchMax} in the center of the glass, display does not touch any other part:

Note: Cross Section Not to Scale. Deformation is exaggerated for clarity.
Other components omitted for clarity.

Avoid “Bottoming Out” Glass

Cross Section A-A:

Note: Cross Section Not to Scale.
Deformation is exaggerated for clarity.
Other components omitted for clarity.
